DHANUSH KUMAR

React Native Developer | Software Engineer

Chennai, India • +91 9123503662 • dhanush8939s@gmail.com • LinkedIn • GitHub

PROFILE

React Native Developer with 4+ years of experience building and delivering scalable cross-platform mobile applications for Android and iOS across HRMS, ATS, and government domains. Experienced in designing reusable component architectures, offline-first solutions, REST API integrations, real-time communication, geolocation, secure authentication, and native module integration. Strong experience in performance optimization, state management, scalable application architecture, and production deployments. Proven track record of contributing to enterprise applications serving 1,000+ users and 10+ client organizations, collaborating with cross-functional teams to deliver reliable and maintainable mobile solutions.

WORK EXPERIENCE

Jul 2022 – Sep 2026

Software Engineer, RapidData Technologies · Chennai

- Developed and maintained cross-platform React Native applications for Android and iOS, owning features from development and API integration through testing and production deployment.
- Designed reusable components, custom hooks, and modular architecture to improve code reusability, maintainability, and development efficiency.
- Integrated REST APIs using Axios, authentication mechanisms, Firebase services, SignalR, and WebSocket-based real-time communication.
- Implemented offline-first workflows, background synchronization, geolocation, geo-fencing, push notifications, and native module integrations for enterprise mobile applications.
- Worked closely with backend, QA, UI/UX, and business teams to translate requirements into scalable and production-ready mobile solutions.
- Optimized application performance, UI responsiveness, network operations, and data handling across Android and iOS devices.
- Contributed to production releases, issue resolution, debugging, maintenance, and continuous enhancement of enterprise applications.

EDUCATION

Aug 2017 – Sep 2021

Bachelor of Engineering in Computer Science, Dhanalakshmi Srinivasan College of Engineering and Technology · Chennai

- Specialized in web & mobile application development through academic mini-projects focused on real-world use cases.
- Collaborated on team-based projects, applying software engineering principles like version control, modular design, and testing.

SKILLS

Languages	TypeScript • JavaScript (ES6+)
Mobile	React Native • Android • iOS • Expo • Native Modules • React Native Bridge • Push Notifications
Architecture	Component-Based Architecture • Modular Architecture • Offline-First Architecture • Design Patterns • Builder • State Machine
React	React Hooks • Custom Hooks • Context API • State Management • Reusable Components • Redux
API Integration	REST APIs • Axios • Interceptors • JSON Handling • Firebase
Realtime	SignalR • WebSockets • Firebase
Authentication & Security	JWT • Microsoft SSO • Role-Based Access Control (RBAC)
Performance	UI Optimization • List Rendering Optimization • Network Optimization • Offline Synchronization
Tools	Git • VS Code • Android Studio • Xcode • Postman • Mendix • Google Play Console

PROJECTS

2025 – Present

Ajman One – Ajman Ports & Customs Services (React Native, System Design)

- Contributed to the development, enhancement, and maintenance of 50+ digital services for Ajman Ports & Customs within Ajman One, a government mobile application developed by the Department of Digital Ajman.
- Integrated secure online payment functionality through the HAJT E-Payment Gateway.
- Designed a config-driven component architecture using the Strategy pattern for dynamic UI rendering, along with reusable abstractions following the DRY principle to improve scalability and maintainability.
- Architected a payment workflow system using a Custom Hook (service layer) and Facade pattern to encapsulate complex multi-step operations, combined with a state-machine-driven flow for controlled execution and Builder pattern for dynamic payload construction.
- Enhanced existing services by improving performance, usability, and reliability, collaborating with cross-functional teams to deliver secure, scalable, and user-centric government solutions.
- Supported ongoing maintenance and issue resolution to ensure high service availability, enabling seamless digital access to complex customs and port-related services and reducing processing turnaround time.

Nov 2022 – Present

RapidHR - Comprehensive HR Platform (Firebase, Native Modules)

- Developed an enterprise HR platform for attendance, approvals, employee lifecycle management, documents, and workforce operations across Android and iOS.
- Engineered an offline-first attendance synchronization system using AsyncStorage and FIFO queuing to persist and sequentially process check-in/check-out events during unreliable network conditions.
- Implemented geo-tracking and geo-fencing using custom native modules.
- Built and optimized shift rostering, LMS, help desk, project management, and employee self-service modules.
- Integrated Firebase push notifications, SignalR-based synchronization, and real-time chat functionality.
- Implemented Microsoft SSO, WebView-based modules, and multi-tenant URL configuration for scalable client deployments.
- Supported production deployment through Google Play Console and ongoing performance optimization and maintenance.

2025 – Present

Erada - HRMS Custom Implementation (React Native, REST API)

- Customized and deployed the RapidHR platform for Erada Center for Treatment and Rehabilitation (UAE), tailoring the application to meet domain-specific business workflows.
- Implemented custom features and workflow enhancements aligned with healthcare requirements, improving operational efficiency and process automation.
- Adapted and extended UI components and configurations based on client needs while maintaining performance, scalability, and stability.
- Handled bug fixes, performance optimizations, and ongoing maintenance to ensure smooth production usage.
- Collaborated with stakeholders to gather requirements and deliver scalable, client-focused solutions.

2024 – 2025

RapidATS - Applicant Tracking System (React Native, TypeScript, REST APIs, RBAC)

- Developed a scalable Applicant Tracking System (ATS) to streamline end-to-end recruitment processes, including job posting, candidate management, and hiring workflows.
- Implemented AI-based features such as resume parsing, skill extraction, and candidate recommendation to enhance hiring efficiency.
- Designed and built custom interview pipelines, automated scheduling, and configurable hiring workflows for different organizational roles.
- Developed key modules including preboarding (document collection & approvals), offer letter generation, and candidate portal with secure login.
- Integrated role-based access control (RBAC) and built analytics dashboards for recruitment insights and hiring funnel tracking.
- Enabled seamless candidate communication, job portal integrations, and talent pool management with tagging and filtering capabilities.
